

This week: presentation and data preparation

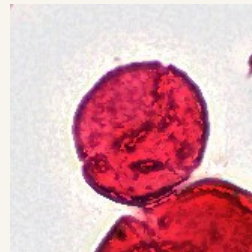

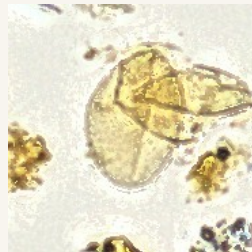

Main focus this week

Prepared and presented our initial class slides and report.

Clarified the scope and evaluation plan.

Initial specimen crops prepared

Example specimens

2,283 single-plane crops · split under review

Full evaluation and classifier training are still ahead.

Previous detectors recover many known specimens

Small diagnostic: 64 annotated targets across 29 microscope slides

Best-plane checkpoint

54/64

84.4% recovered

Focus-stack checkpoint

51/64

79.7% recovered

Encouraging for reuse; broader evaluation is still needed.

Known-target recovery in centered crops—not whole-slide or classification accuracy.

Finalize the training, validation, and test sets

01

Review the examples

Check crop quality
and uncertain labels.

02

Finalize the split

Group related slides;
check category coverage.

03

Start the baseline

Train the first classifier
and evaluate its errors.

Also: resolve shared storage for the full multifocal crop export.
